# **Monthly Summary** of Statistics

**New South Wales** 

#### NOTES

#### SEASONALLY ADJUSTED INDICATORS

In most instances, the aim in compiling monthly or quarterly economic time series is to provide evidence of movement, in order to indicate the effects changing conditions are having on the activities being measured — and, in so doing, to signal what might be likely to occur in the near future. Seasonal adjustment is a technique designed to assist in these processes of analysis and interpretation by removing the estimated effects of normal seasonal variation from statistical series, so that the effects of other influences on the series may be more clearly recognised.

Details of the methods used in deriving the seasonally adjusted figures shown in this publication are given in the publication Seasonally Adjusted Indicators (1308.0), last issued in 1983 by the Central Office of the ABS.

Seasonally adjusted statistics are revised following revision to the original data and as additional data are brought into the analysis each year.

For series where one of the components and the total of the components have been seasonally adjusted (e.g. private dwellings and total dwellings), any figures derived by deduction (in the example quoted — government dwellings) do not amount to a formally seasonally adjusted series for the balance of the components.

SYMEQLS AND OTHER USAGES

kWh kilowatt hour

litre L

n.p.

MJ megajoule

not available n.a.

not elsewhere classified n.e.c.

not elsewhere specified n.c.s. not available for publication but included in totals where applicable

not yet available n.y.a.

figure or series revised since previous issue

subject to sampling variability too high for most practical purposes

not applicable

nil or rounded to zero

break in continuity of series (where a line is drawn across a column between two consecutive figures)

NOTE: Monthly Summary of Statistics preliminary figures are not indicated by the symbol 'p'. All revisions, however, will be indicated by the symbol 'r'.

INQUIRIES

For information about other ABS statistics and services, please refer to the back of this publication.

Gregory W. Bray Regional Director New South Wales

- (a) Statistics in this table relate to vital events which occurred in each quarter and year shown, and are registered up to the release of this publication. Because of late registrations, they are likely to be revised, particularly the most recent periods.
- (b) Births and deaths statistics relate to events which occurred in Australia where the usual residence was within NSW.
- (c) Deaths under one year of age.
- (d) Number per 1,000 of estimated resident population at 30 June, or number of infant deaths per 1,000 live

<sup>(</sup>a) Period from the time the person began looking for work or was stood down to the end of the reference week. Period of unemployment is recorded in complete weeks and this results in a slight understatement of duration.

<sup>(</sup>b) Average duration is obtained by dividing the aggregate number of weeks a group has been unemployed by the number of persons in that group.

<sup>(</sup>a) Full-time employees are permanent, temporary and casual employees who normally work the agreed or award hours for a full-time employee in their occupation and received pay for any part of the reference period. If agreed or award hours do not apply, employees are regarded as full-time if they ordinarily work 35 hours or more per week.

NOTE: The tables on pages 12 and 13 contain estimates derived from the Survey of Employment and Earnings, an Australia-wide employer-based survey. Explanatory notes are contained in *Employed Wage and Salary Earners*, *Australia* (6248.0), which is issued quarterly and is available from the Sydney Office of the ABS. Estimates derived from the Survey of Employment and Earnings will differ from labour force estimates derived from the Monthly Population Survey for the reasons set out in the Information Paper Comparison of Employment Estimates from the Labour Force Survey and the Survey of Employment and Earnings (6263.0).

<sup>(</sup>b) Part-time employees are permanent, temporary and casual employees who are not full-time employees as previously defined.

- (a) Overtime is time worked in excess of award, standard or agreed hours of work for which payment is received. Overtime hours represent the number of hours of overtime paid for.
- (b) The figures shown are based on the last pay period ending on or before the third Friday of the month shown.
- (c) Calculated by dividing total overtime hours paid for in each group by the total number of employees in the same group.
- (d) Calculated by dividing total overtime hours paid for by the number of employees who were paid for overtime.
- (e) The number of employees who were paid for overtime as a percentage of the total number of employees.

<sup>(</sup>a) Working days lost refer to days lost by:

 <sup>(</sup>i) employees who were directly involved in the dispute, and
 (ii) employees who worked in establishments where stoppages occurred but were not themselves parties to the disputes; excluded is

occurred but were not themselves parties to the disputes; excluded the time lost, as a result of the disputes, by employees in other establishments.

<sup>(</sup>b) Relates to industrial disputes involving a stoppage of work for a minimum of 10 working days, regardless of the length of the stoppage, for example, 80 employees on strike for one hour. Disputes are classified by industry according to the Australian and New Zealand Standard Industrial Classification (ANZSIC). Disputes prior to January 1994 are classified by industry according to the Australian Standard Industrial Classification (ASIC).

<sup>(</sup>a) Base of each group index: 1989-90 = 100.0

NOTE: The Consumer Price Index is designed to measure quarterly variations in the level of retail prices for goods and services which represent a high proportion of the expenditure of wage and salary earner households. The index covers a large and representative selection of commodities and services arranged in eight major groups.

<sup>(</sup>b) Weighted average of eight capital cities.

<sup>(</sup>a) Base of each group index: 1989-90 = 100.0

NOTE: Each of the indexes shown on tables 15 and 16 are separate and distinct price indexes. The composition of the groups of each index is in accordance with materials usage in the class of building covered by that index. Further information regarding these indexes is published in Price Index of Materials Used in Building Other Than House Building, Six State Capital Cities (6407.0) and Price Index of Materials Used in House Building, Six State Capital Cities (6408.0).

<sup>(</sup>b) Weighted average of six State capital cities.

<sup>(</sup>a) Gross output drawn from the mine, prior to treatment in coal washeries for removal of unwanted material, but excluding dirt and chitter dumped or not otherwise used.

Source: Joint Coal Board.

<sup>(</sup>b) Raw coal production less rejects removed at coal industry washeries plus/less unexplained stock adjustments at mines only.

<sup>(</sup>a) The figures shown are estimates derived from a monthly survey of retail establishments. Excludes motor vehicle, boat and caravan dealers, service stations, smash repairers, tyre and battery retailers, bread and milk vendors, footwear repairers and electrical appliance repairers n.e.c. Retail establishments which do not have employees

are excluded from the survey. Turnover includes retail sales; wholesale sales; takings from repairs, meals and hiring of goods; and commissions from agency activity (e.g. commissions received from collecting dry cleaning, selling lottery tickets etc.).
